PROFESSIONAL SUMMARY

Senior Frontend Engineer with 5 years of experience building React applications for healthcare, RCM, procurement, and operational workflows. I build and own frontends from scratch, with modular architecture, role-aware navigation, real-time state synchronization, resilient API integration, and complex forms. My work includes AI-assisted product flows with editable drafts and human review.

TECHNICAL SKILLS

Core Frontend: React.js, JavaScript ES6+, React Router, HTML5, CSS3, Tailwind CSS, Responsive UI, Reusable Components
Architecture & State: Feature Modules, TanStack Query, Server/Client State, API Layer Design, Role-Aware Routes, Error Boundaries
Realtime & Reliability: Socket.IO, SSE, Event Deduplication, Replay/Reconciliation, Session Recovery, ETag Caching, Request Cancellation
Product UI & Quality: React Hook Form, Yup, Vite, Lazy Loading, Code Splitting, Vitest, Playwright, AI-Assisted Workflows

SELECTED IMPACT

- Built **reusable React components** for dashboards, forms, uploads, and operational workflows, with shared keyboard, focus, and error-handling behavior.
- **Architecture:** organized frontend features behind **public module contracts** and lazy-loaded routes, with role-aware navigation and automated checks for dependency boundaries.
- Covered authentication recovery, real-time ordering, query refreshes, and form-state races with focused unit, integration, and Playwright browser tests.

PROFESSIONAL EXPERIENCE

Senior Frontend Developer | Otomashen | Noida, India | Nov 2024 - Present

- Built and owned frontend applications for virtual-care and vendor-management platforms from scratch, defining React/Vite architecture, modular routing, API integration, state ownership, and reusable patterns.
- Implemented Socket.IO event deduplication, ordering safeguards, reconnect replay, and REST reconciliation to recover consistent operational queues and availability after connection loss.
- Centralized authenticated API requests with shared session refresh, bounded retries, request cancellation, and safeguards against stale responses after logout or session changes.
- Integrated SSE notifications with TanStack Query invalidation, preserving filters and cached rows during refreshes; protected form edits from background updates and late responses.
- Built frontend flows for AI-assisted job creation from prompts and documents, with follow-up questions, editable drafts, human review, and answer revision that avoids replaying final submission.

Frontend Developer | Aakaar Biotechnologies Pvt. Ltd. | India | Aug 2023 - Jul 2024

- Enhanced React CRM and e-commerce modules with reusable components, clearer state/data flow, REST API integrations, and responsive UI patterns for customer-facing workflows.
- Integrated WooCommerce payment workflows and supported CRM features through reusable frontend patterns, clearer API coordination, and stable user-facing flows.
- Supported application deployment and hosting workflows, including DNS, domain configuration, Windows Server setup, and IIS configuration.

Frontend Developer | Tata Consultancy Services | India | Apr 2021 - May 2023

- Built React.js automation and tracking interfaces using Carbon Design, Google Maps APIs, REST APIs, and reusable components for enterprise workflows.
- Implemented multilingual i18n support and used Swagger-backed API documentation to coordinate frontend integrations across application workflows.
- Added Jest tests in assigned project areas and mentored junior developers on React.js, state management, component structure, and code quality.

EDUCATION

B.Tech in Computer Science | University of Petroleum and Energy Studies, Dehradun | 2016 - 2020

AWARDS AND RECOGNITION

Best Team Award - TCS | Special Initiative Award - Automation and innovation contribution
